

# Twist® Roller Blinds

Distinctive ambiance and privacy control in one

Two sliding layers of fabric with sheer horizontal strips. This is the hallmark of Twist® Roller Blinds. It's an amazingly simple and effective method for choosing just the right amount of incoming light and privacy.

You can opt for refined voiles or a silky fabric with a lovely luxurious feel in the open strips. Alternatively you can choose the Symphony with segments in three different shades. Whatever you decide, the quality will be outstanding.

## Distinctive ambiance and privacy control in one product

Luxaflex® Twist® Shades roller blinds with a double layer of fabric, made up of solid and sheer fabric segments. The light and privacy can be controlled by raising or lowering the blind. Operation is via a stainless steel ball chain or motorisation

Luxaflex® Twist® Shades are available in 3 models:

- **Standard:** Blind with plastic brackets, control set, disc inserts and aluminium mounting profile.
- **Designer:** Blind with aluminium brackets, control set and mounting profile with plastic disc inserts.
- **Cassette:** Blind with full aluminium cassette, control set with chain guides and plastic disc inserts.

Hardware available in 3x colours: White, Grey & Black

Unique bottom bar reduces the chance of fabric fraying

## Light filtering & privacy

Fabric segments are larger than the sheer sections to ensure full overlaps, top & bottom. Due to the thickness of the bottom bar the layers of fabric are approximately 10mm apart and will allow some light to filter through.

## Fabric edges

The factory clean cuts the fabric and will remove any loose threads during production. If loose yarns appear over time we recommend it to be cut with a pair of scissors. Pulling on yarns will damage the fabric.

## Cleaning Twist® Shades

Gently clean the fabric with a brush or a dry towel

## View through sheer fabric segments

A moiré pattern can occur when 2 sheer sections overlay. The effect depends on the colour, weave structure and will vary between fabrics in the collection.

## Alignment of fabric

Shades will always be supplied as an "optimum" in the fully closed position, When the blind is fully drawn, the fabric remains thereby ensuring privacy. The solid fabric segments are larger than the sheer segments and allow for adequate overlap.
